

DAYLIGHT WRITER — MASTER DESIGN PACKET

Comprehensive Specification & Visual Redesign Brief for Claude Design

Target: Daylight Computer (DC1) 10.5" LivePaper Display (Sol:OS) · Includes LivePaper Dark Mode & Claude-to-Compose Pipeline

1. Executive Brief & Architecture

Daylight Writer is the flagship distraction-free typewriter writing application engineered specifically for the **Daylight Computer (DC1)** running **Sol:OS**. It synthesizes the monastic zero-chrome focus of **iA Writer**, the hierarchical organizational power and continuous scrivenings of **Scrivener**, the tactile journaling aesthetic of **Day One (iOS)**, and modern AI writing affordances inspired by **Lex.page**. It features full local-first persistence via **wa-sqlite (OPFS)** and automatic, debounced (1.5s) background synchronization to **Google Drive & Google Docs (application/vnd.google-apps.document)** inside a dedicated *'Daylight Manuscripts'* folder.

Goal of this Packet: Provide Claude Design with complete context, exact hardware constraints, design tokens, DOM hierarchy, and 12 authentic hardware screenshots so it can generate an elevated, cohesive redesign featuring a brand-new **LivePaper Dark Mode**. The resulting web artifact will be converted directly into native Android Jetpack Compose code via the autonomous `/claude-to-compose` pipeline.

2. DC1 Physical Hardware & LivePaper Display Profile

Hardware Dimension	Daylight Computer (DC1) Specification
Display Technology	Custom Sharp NT36523N Transflective / Reflective LCD (LivePaper)
Display Geometry	10.5-inch diagonal, 4:3 landscape aspect ratio (1600 × 1200 physical)
Active Logical Viewport	1584 × 1184 pixels (270 DPI, with +8px physical touch inset)
Native Refresh Rate	60Hz to 120Hz fluid refresh (Mode 2: 120.0 fps, sub-frame response)
Color Depth	8-bit Grayscale (256 discrete levels) , monochrome + calibrated tints
Illumination	Pure ambient light reflection (sunlight readable, 0 blue light) + amber frontlight
EPD / E-Ink Invariant	ZERO E-Ink artifacts: NO electrophoretic particles, NO ghosting, NO waveform flashes
Physical Input / Sensors	Chassis Action Key (F12 / keycode 142), Folio Hall sensor, Wacom I2C digitizer

3. Daylight Design System & The New LivePaper Dark Mode

The DC1 display requires strict contrast calibrating. On an 8-bit reflective panel, low-contrast grays collapse under direct sunlight or amber frontlight. All interfaces must adhere strictly to pre-calibrated tokens.

Token	Hex	Sol:OS Light Usage	LivePaper Dark Mode Usage
--os-0	#FFFFFF / #000000	Base paper / canvas ground	Deep black chalkboard ground

--os-50	#F7F7F7 / #121212	Drawer surface, card panels	Recessed drawer surface
--os-100	#DCD5C9 / #1F1F1F	Hairline borders (1px)	Card surface / floating modals
--os-150	#F5F5F5 / #292929	Recessed search / inputs	Recessed input fields
--os-200	#CCCCCC / #3D3D3D	Inactive / disabled / leader	1px hairline card borders
--os-300	#858585 / #555555	Dimmed focus text, clock	Inactive tab indicators
--os-400	#535353 / #888888	Secondary ink, previews	Dimmed focus sentences
--os-800	#343434 / #B8B8B8	Active pills, pressed states	Secondary text ink
--os-900	#1A1A1A / #EBEBEB	Primary text ink, headings	Primary text ink, headings
--os-1000	#000000 / #FFFFFF	Max black ink, focused sentence	Max white ink, focused sentence

4. Comprehensive Surface Area Breakdown (9 Surfaces)

Surface 1: Typewriter Canvas & Focus Mode: Centered manuscript measure (max 720px, 65-75 CPL), line-height 1.7. True typewriter center-scrolling keeps the cursor vertically locked at 50% viewport height. Sentence/paragraph focus dimming elevates active text to max contrast while softly dimming surrounding lines. Pressing Esc restores pure zero-chrome typography.

Surface 2: Minimal Header & Live Sync Status Pill: Auto-hides during active typing. Features inline document auto-titling, live word count, reading time, and real-time cloud sync pill (● Synced 14:02, ■ Syncing... [count], ■ Offline, ■ Error). Includes fast icon buttons for Dark Mode toggle and settings.

Surface 3: Left Drawer (Library, Search & Scrivener Binder): Collapsible 320px panel. Provides instant sub-15ms fuzzy search, tag pills (#essays/drafts), hierarchical folder tree with drag reordering, status chips ([DRAFT], [REVISED], [FINAL]), and Day One 2-column calendar date badges (Blue #2468C8 / Sol:OS gray).

Surface 4: Right Drawer (Thought Margin / Scratchpad): Collapsible 360px panel. Margin notes are mathematically pinned to the exact Y-coordinate of their matching paragraph. Scrolling the canvas smoothly translates the margin cards in real time at 120Hz. Supports corkboard index cards with dashed borders.

Surface 5: Lex-Inspired AI Writing Affordances: Inline streaming continuation triggered by typing +++ with Cmd+Z recovery. Floating Cmd+K command palette positioned above highlighted text for tone shifts, expansion, and structural critique. Non-modal hairline underlines for clarity checks.

Surface 6: Settings & Multi-Theme Switcher Modal (Cmd+,): Centered dialog with live interactive mini-preview cards for all 4 themes: Daylight Sol:OS, Day One iOS, Scrivener Studio, and the new LivePaper Dark Mode. Includes typography font family selector, slider controls for font size, and focus mode preferences.

Surface 7: Google Drive & Google Docs Auto-Sync Dialog: Displays connected user account (a12katta@gmail.com), dedicated 'Daylight Manuscripts' folder location, 1.5s background typing debounce mechanics, in-place Docs API v1 batchUpdate patching, force sync button, direct token fallback, and live event telemetry.

Surface 8: Multi-Format Document Export Modal (Cmd+E): Export sheet offering Markdown (.md), Plain Text (.txt), Word (.docx), and PDF (.pdf). Integrates Android Storage Access Framework (SAF) save file picker (ACTION_CREATE_DOCUMENT) and native system Share Sheet (Intent.ACTION_SEND).

Surface 9: Scrivenings Concatenation & Corkboard View: Multi-document continuous authoring mode: concatenates chapters and sub-scenes into a single unified manuscript separated by § glyph dividers. Toggles to a tactile corkboard grid showing synopses and progress bars toward target word counts.

5. Visual Reference Gallery: DC1 Hardware Screenshots

Below are authentic high-resolution screenshots captured directly from the physical Daylight Computer (DC1) display. Claude Design should study these layouts and elevate their visual hierarchy, micro-interactions, and dark mode representations:

vertically on screen at the 50% midpoint. - Focus Modes: Dim inactive sentences or paragraphs to enter deep writing flow without visual clutter. - Dual Drawers: Swipe from the left for your document library and hierarchical tags, or swipe from the right to view thought margin notes anchored to paragraphs. Press Esc or Cmd+[to return to pure zero-chrome writing. - Quick AI: Type +++ anywhere to request an

6. The Master Copy-Paste Prompt for Claude Design

Copy and paste the formatted prompt below directly into Claude 3.5 Sonnet / Claude Design / Artifacts. The prompt is engineered to produce an interactive, responsive web artifact that adheres to Sol:OS standards and plugs directly into `claude-to-compose`:

PROMPT FOR CLAUDE DESIGN:

You are the Principal Product Designer & Design Systems Architect at Daylight Computer Co., collaborating with founder Anjan Katta.

Create a complete, breathtaking, production-grade redesign of **Daylight Writer** for the **Daylight Computer (DC1)** running **Sol:OS**.

1. Physical Display Constraints:

- 10.5" LivePaper Reflective LCD (1584×1184 landscape viewport, 270 DPI, 4:3 aspect ratio).
- Native 60Hz-120Hz fluid refresh rate. 8-bit Grayscale (256 discrete levels).
- ZERO E-Ink artifacts: No electrophoretic particles, no ghosting, no waveform clear flashes.
- Pure amber eye-safe frontlight illumination. High contrast ($\geq 7.0:1$ WCAG AAA).

2. Switchable Themes to Implement:

- **Daylight Sol:OS (Default)**: #FFFFFF ground, #F7F7F7 surfaces, #DCD5C9 borders, #1A1A1A primary ink.
- **Sol:OS LivePaper Dark Mode (NEW)**: #000000 chalkboard ground, #121212 drawers, #1F1F1F cards, #3D3D3D borders, #EBEBEB text, #FFFFFF active sentence, #E2A93B amber accents.
- **Day One iOS**: Rounded 14px cards, signature blue (#2468C8) 2-column date badges, SF Pro type.
- **Scrivener Studio**: Warm parchment (#FAF8F5), classic Mac binder (#EAE6DF), corkboard dashed cards.

3. All 9 Surface Areas Required:

1. Typewriter Canvas with iA Writer-style sentence/paragraph focus dimming & center-scrolling.
2. Auto-hiding Header with real-time Google Docs sync pill (● Synced, ■ Syncing, ■ Offline).
3. Left Drawer: Library fuzzy search, tags, Scrivener binder hierarchy, and Day One date cards.
4. Right Drawer: Spatially synchronized Thought Margin cards anchored to paragraph Y-coordinates.
5. AI Writing Affordances: Inline '+++' continuation, Cmd+K command bar, non-modal checks.
6. Settings Modal (Cmd+;): Visual theme selector cards with live mini-previews & dark mode toggle.
7. Google Drive & Docs Modal: Account pill, 'Daylight Manuscripts' folder, live sync telemetry logs.
8. Multi-Format Export Modal (Cmd+E): .md, .txt, .docx, .pdf, and Android SAF trigger.
9. Scrivenings Concatenation: Multi-section manuscript flow with § dividers & corkboard grid.

4. Output Delivery:

Deliver as a self-contained, interactive HTML/CSS/JS web artifact with touch targets ≥ 48 dp, semantic tags, and live theme switching so it can be ingested by `/claude-to-compose` to synthesize native Android Jetpack Compose code.

7. Claude-to-Compose Implementation Guide

Once Claude Design outputs the shareable link (e.g. <https://claude.site/artifacts/...>) or local HTML file, run the automated pipeline in Antigravity:

```
/claude-to-compose <input-url-or-file> -a ./android -p com.daylight.writer
```

Automated Multi-Agent Pipeline Execution:

- **Extractor Agent:** Headless Playwright extracts computed layout, typography, 8-bit colors, and screenshots.
- **Compose Architect:** Generates Theme.kt, Color.kt, atomic composables, and ClaudeDesignScreen.kt.
- **Motion Specialist:** Adds 150ms fluid LivePaper transitions, touch ripples, and ≥ 48 dp touch targets.
- **Visual QA Agent:** Runs Gradle compile, Robolectric preview capture, Pixelmatch/SSIM diff, and 10-point audit rubric (score ≥ 90).
- **Hardware Attestation:** Compiles native Android APK and verifies 120Hz locked rendering on connected DC1 tablet (rooted 4).
